New Mexico's Corrections Department Goes Live State-wide with ISE for Scheduling & Overtime Management

Vancouver, B.C. Canada, April 23, 2009 —InTime Solutions is pleased to announce that its ISE next-generation employee scheduling and deployment enterprise software solution, built specifically for managing and scheduling public safety personnel, has now been live for over one year as the statewide scheduling system for New Mexico's Corrections Department.

InTime Solutions' software provides a technologically advanced system for the administration and maintenance of staff schedules, to monitor overtime and to ensure uniform administrative practices throughout the state at six separate prison facilities. Using ISE, overtime is tracked and allocated accurately, allowing administrators to accumulate and analyze the information in the search for better, more cost-effective ways to assign manpower. The implementation has allowed this agency to integrate with the state's PeopleSoft system for payroll, further streamlining internal operations.

"In these times of financial constraint, corrections and all public safety organizations need to manage their work scheduling tasks effectively and cost-efficiently, and the ISE scheduling software enables that administrative function," said Harry Dollard, president and CEO of InTime Solutions, which has more than 500 public safety agencies using InTime products to manage their scheduling needs.

"With six separate facilities and staffing challenges, New Mexico's Department of Corrections has been able to use ISE to oversee its scheduling centrally and continually look for ways to improve the effectiveness of its corrections officers. It is vital to control OT costs while ensuring the safety of officers and inmates. ISE enables easy integration with PeopleSoft and a well-organized scheduling structure," added Dollard.

About ISE

Built on an enterprise-class IT infrastructure, ISE has proved to be reliable and scalable for large deployments. It is the powerful and proven public safety software tool that takes care of building, maintaining and controlling the scheduling of an organization's workforce, no matter how large the organization or how it is run.

About InTime Solutions Inc.

Founded in 1996, InTime Solutions is a scheduling product leader in the public safety marketplace. We develop software and service solutions to more efficiently manage the allocation and deployment of your workforce. Our clients rely on us to improve utilization of personnel and to integrate the associated information with other systems within their organization.
